Plugin Performance Report

PLUGIN	VERSION	TOTAL SIZE	IMPACT
--------	---------	------------	--------

learndash-propanel

learndash-propanel

3.0.3

5819KB

CSS: 240KB | JS: 5578KB

HIGH**Recommendations**

- Consider optimizing or replacing this plugin due to its large size impact.
- Enable conditional loading to prevent assets from loading on pages where not needed.
- Consider minifying CSS files and removing unused styles.
- Consider code splitting and lazy loading for JavaScript files.

Elementor

elementor

3.28.4

382KB

CSS: 271KB | JS: 110KB

HIGH**Recommendations**

- Consider optimizing or replacing this plugin due to its large size impact.
- Enable conditional loading to prevent assets from loading on pages where not needed.
- Update to the latest version of the plugin to benefit from recent performance improvements and security fixes.
- Consider minifying CSS files and removing unused styles.

Site Issues & Fixes

A comprehensive report of detected issues and actionable recommendations.

! Detected Site Issues

Security Vulnerabilities

2 plugins are outdated, posing potential security and compatibility issues.

Heavy Plugins

3 plugins are consuming excessive server resources, slowing down your site.

Poor Performance Scores

Site performance is below optimal levels. Mobile: 0, Desktop: 0.

Poor Core Web Vitals

LCP (Infinitys) and other Core Web Vitals need improvement for better user experience.

No Caching

Caching is not implemented, which is crucial for website performance optimization.

No Security Plugin

No dedicated security plugin detected. Your site may be vulnerable to attacks.

Recommended Fixes

Secure Your Website

HIGH PRIORITY

Address security vulnerabilities by installing a dedicated security plugin and keeping all components updated.

Actionable Steps:

- Install and configure Wordfence or Sucuri Security.
- Run a full site scan to identify and remove malware.
- Update all outdated plugins and themes to their latest versions.

Implement Caching & CDN

HIGH PRIORITY

Dramatically improve page load times by caching content and using a Content Delivery Network (CDN).

Actionable Steps:

- Install a caching plugin like WP Rocket or W3 Total Cache.
- Set up a CDN service such as Cloudflare to distribute your content globally.
- Configure minification and file combination settings within your caching plugin.

Optimize Plugins

MEDIUM PRIORITY

Review and manage your plugins to reduce resource consumption and potential conflicts.

Actionable Steps:

- Deactivate and delete any unused plugins.
- Investigate heavy plugins and find lightweight alternatives if possible.
- Regularly update all active plugins to ensure compatibility and security.

Improve Core Web Vitals

HIGH PRIORITY

Optimize LCP, CLS, and other Core Web Vitals for better user experience and SEO rankings.

Actionable Steps:

- Optimize images and implement lazy loading.

- Minimize layout shifts by setting image dimensions.
- Preload critical resources and optimize CSS delivery.
- Reduce JavaScript execution time and third-party scripts.

Optimize Media & Database

LOW PRIORITY

Compress images and clean your database to further improve site speed and efficiency.

Actionable Steps:

- Use a plugin like Smush or EWWW Image Optimizer to compress your media library.
- Install a database optimization plugin like WP-Optimize to clean up overhead.
- Serve images in next-gen formats like WebP for better performance.

Install Essential Plugins

MEDIUM PRIORITY

You're missing 4 essential plugin categories that are recommended for a complete WordPress site.

Actionable Steps:

- Install security plugin: Wordfence Security - Comprehensive security protection
- Install performance plugin: WP Rocket - Premium caching and optimization
- Install backup plugin: UpdraftPlus - Reliable backup and restoration
