Executive Summary

Total Plugins	Performance	WordPress Version	Overall Status
7	85/100	6.8.2	Needs Attention

Active Theme

THEME NAME	DIRECTORY	VERSION	AUTHOR
Astra	Astra	4.9.0	Brainstorm Force

Plugin Performance Report

PLUGIN	VERSION	TOTAL SIZE	IMPACT
learndash-propanel learndash-propanel	3.0.3	**5819KB** CSS: 240KB | JS: 5578KB	HIGH

Recommendations

- Consider optimizing or replacing this plugin due to its large size impact.
- Enable conditional loading to prevent assets from loading on pages where not needed.
- Consider minifying CSS files and removing unused styles.
- Consider code splitting and lazy loading for JavaScript files.

Elementor elementor	3.28.4	**382KB** CSS: 271KB | JS: 110KB	HIGH

Recommendations

- Consider optimizing or replacing this plugin due to its large size impact.
- Enable conditional loading to prevent assets from loading on pages where not needed.
- Update to the latest version of the plugin to benefit from recent performance improvements and security fixes.
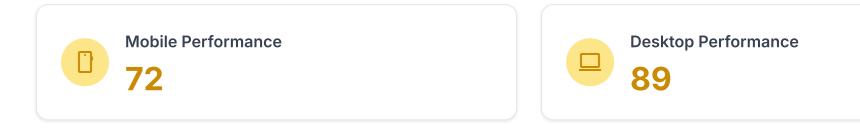

PLUGIN	VERSION	TOTAL SIZE	IMPACT
• Consider minifying CSS files and removing unused styles.			
sfwd-lms sfwd-lms	4.21.1	**268KB** CSS: 224KB | JS: 44KB	HIGH

Recommendations

- Consider optimizing or replacing this plugin due to its large size impact.
- Enable conditional loading to prevent assets from loading on pages where not needed.
- Consider minifying CSS files and removing unused styles.

elementor-pro elementor-pro	3.28.3	**123KB** CSS: 26KB | JS: 97KB	MEDIUM

Recommendations

- Monitor this plugin's performance impact and consider optimization if site speed is affected.

grassblade grassblade	6.2.8	**73KB** CSS: 13KB | JS: 60KB	MEDIUM

Recommendations

- Monitor this plugin's performance impact and consider optimization if site speed is affected.

learndash-notes learndash-notes	1.1.3	**11KB** CSS: 4KB | JS: 7KB	LOW

PLUGIN	VERSION	TOTAL SIZE	IMPACT
astra-sites astra-sites	4.4.15	**6KB** CSS: 0KB | JS: 6KB	LOW

Recommendations

- Update to the latest version of the plugin to benefit from recent performance improvements and security fixes.

Site Issues & Fixes

A comprehensive report of detected issues and actionable recommendations.

⊘ Detected Site Issues

🛡 Security Vulnerabilities

2 plugins are outdated, posing potential security and compatibility issues.

📊 Heavy Plugins

3 plugins are consuming excessive server resources, slowing down your site.

🔄 No Caching

Caching is not implemented, which is crucial for website performance optimization.

🔒 No Security Plugin

No dedicated security plugin detected. Your site may be vulnerable to attacks.

✓ Recommended Fixes

Secure Your Website

HIGH PRIORITY

Address security vulnerabilities by installing a dedicated security plugin and keeping all components updated.

Actionable Steps:

- Install and configure Wordfence or Sucuri Security.
- Run a full site scan to identify and remove malware.
- Update all outdated plugins and themes to their latest versions.

Implement Caching & CDN

HIGH PRIORITY

Dramatically improve page load times by caching content and using a Content Delivery Network (CDN).

Actionable Steps:

- Install a caching plugin like WP Rocket or W3 Total Cache.
- Set up a CDN service such as Cloudflare to distribute your content globally.
- Configure minification and file combination settings within your caching plugin.

Optimize Plugins

MEDIUM PRIORITY

Review and manage your plugins to reduce resource consumption and potential conflicts.

Actionable Steps:

- Deactivate and delete any unused plugins.
- Investigate heavy plugins and find lightweight alternatives if possible.

- Regularly update all active plugins to ensure compatibility and security.

Optimize Media & Database

LOW PRIORITY

Compress images and clean your database to further improve site speed and efficiency.

Actionable Steps:

- Use a plugin like Smush or EWWW Image Optimizer to compress your media library.
- Install a database optimization plugin like WP-Optimize to clean up overhead.
- Serve images in next-gen formats like WebP for better performance.

Install Essential Plugins

MEDIUM PRIORITY

You're missing 4 essential plugin categories that are recommended for a complete WordPress site.

Actionable Steps:

- Install security plugin: Wordfence Security - Comprehensive security protection
- Install performance plugin: WP Rocket - Premium caching and optimization
- Install backup plugin: UpdraftPlus - Reliable backup and restoration
